ApÃ³Ás estes dez anos de implementaÃ§Ã£Ão desta atividade e embasados na necessidade de compreensÃ£Ão e aplicaÃ§Ã£Ão da metodologia assistencial a ser desenvolvida na InstituiÃ§Ã£Ão entendemos que para a adequada aplicaÃ§Ã£Ão de uma sistematizaÃ§Ã£Ão da assistÃªÂncia de enfermagem devemos utilizar uma Teoria de Enfermagem, onde We will only do the work itself, using the nursing process, but also, allowing the organisational organizations of nursing work with respect to the complete, personal instruments and that the nursing process that are the SAE facilities are possible (Backes and Schwartz, 2005). Results: We are beginning the application of this new instrument and the preliminary results show some difficulty in the application of this new tool, as we use according to the proposal of the unused terminology in our practices, such as the requirements of universal self-care, development and development. Health deviations, among others, that for those who are not updated with new terminology and especially for other health professionals who are not nurses, become a difficult understanding. The objectives of the construction of this admissive model were: to carry out the support of admissible nursing in a scientific support to avoid the suspension of the surgery or the complications resulting from the poor information of the clients and the members of the family, such as the incorrect use of medicines, and elaborated at the time of the diagnostic admission consultation of nursing and provisions based on the taxonomy of the Diagnostic Nursing Association of North America (Nbulae) Methodology: This work is descriptive, exploitation with a qualitative approach.
